

# Directional spool valves, pilot-operated, with electro-hydraulic actuation

## Type H-4WEH ...XE

H8097

- ▶ Size 10 ... 32
- ▶ Component series 4X; 6X; 7X
- ▶ Maximum operating pressure 350 bar
- ▶ Maximum flow 1100 l/min

### ATEX units

#### For potentially explosive atmospheres

##### Information on explosion protection:

- ▶ Area of application in accordance with the Explosion Protection Directive 2014/34/EU:  
**II 2G; II 2D**
- ▶ Type of protection valve:
  - Ex h IIC T4 Gb X according to EN 80079-36
  - Ex h IIIC T115°C Db X according to EN 80079-36
- ▶ Type of protection, solenoid coil:
  - Ex eb mb IIC T4 Gb according to EN 60079-7 / EN 60079-18
  - Ex tb IIIC T115°C Db according to EN 60079-31
- ▶ Solenoid coil certified according to IECEx

### Features

- ▶ 4/3 or 4/2-way version
- ▶ For intended use in potentially explosive atmospheres
- ▶ Internal or external pilot control
- ▶ Subplate mounting
- ▶ Porting pattern according to ISO 4401
- ▶ Spring centering, spring end position or hydraulic end position
- ▶ Wet-pin DC or AC solenoids
- ▶ Solenoid coil is rotatable by 90°
- ▶ Manual override, optional
- ▶ Electrical connection as individual connection with cable gland
- ▶ Switching time adjustment, optional
- ▶ Preload valve in channel P of the main valve, optional

<sup>1)</sup> 2 spool positions (hydraulic end position): only symbols C, D, K, Z, Y

<sup>2)</sup> Pilot oil supply X or return Y **external**:

- ▶ Maximum pilot pressure: see page 10.
- ▶ At a higher pilot pressure, version "**D3**" must be used.

<sup>3)</sup> Pilot oil supply **internal** (versions "ET" and "E"):

- ▶ Minimum pilot pressure: see page 10.
- ▶ Maximum pilot pressure: see page 10.
- ▶ In order to prevent inadmissibly high pressure peaks, a **throttle insert "B10"** has to be provided in port P of the pilot control valve (see page 9).
- ▶ Version "**D3**" must be used.

<sup>4)</sup> In connection with throttle insert "**B10**"

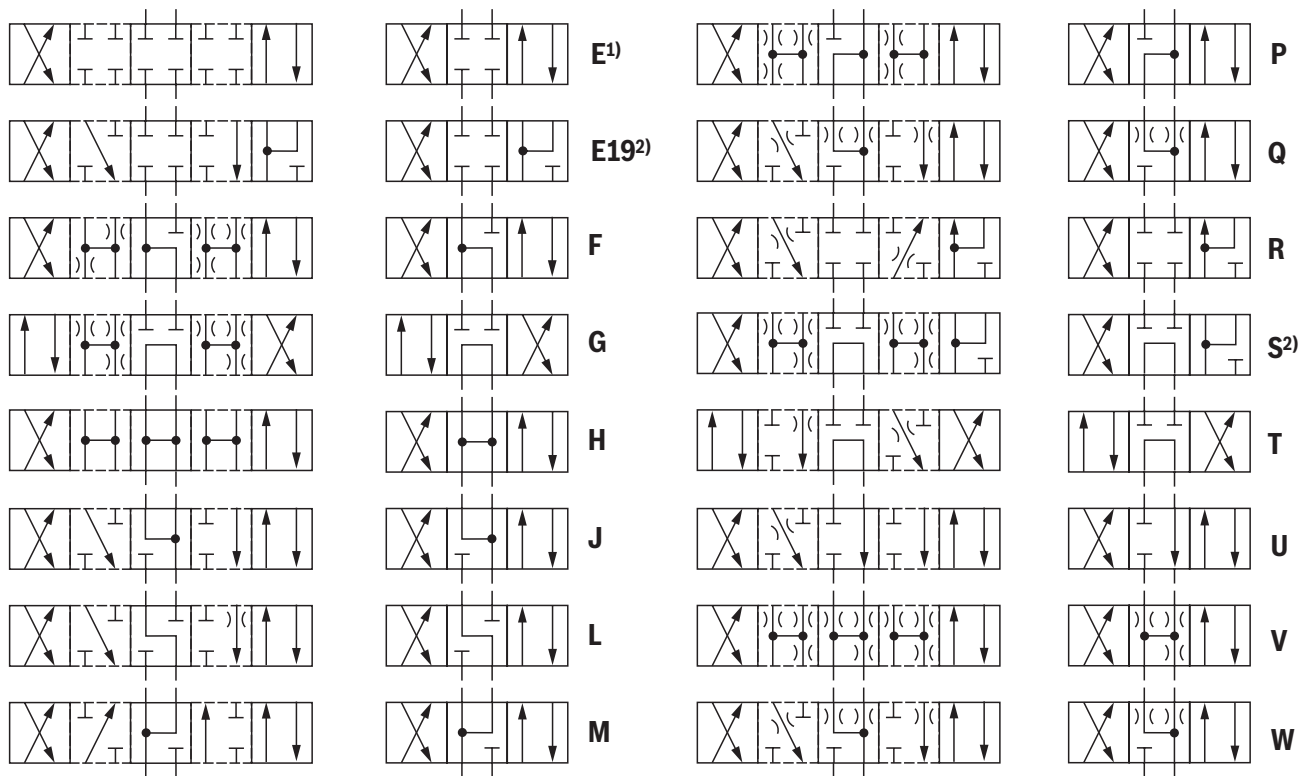

#### Notice:

The manual override cannot be assigned a safety function. It may only be actuated up to a tank pressure of 50 bar.

**Symbols:** 2 spool positions

## Function, section

Type H-4WEH 16...XE...

The valve type H-4WEH is a directional spool valve with electro-hydraulic actuation. It controls the start, stop and direction of flow.

The directional valve basically consists of the main valve with housing (1), the main control spool (2), one or two return springs (3.1) and (3.2), as well as the pilot control valve (4) with one or two solenoids "a" (5.1) and/or "b" (5.2).

**For unobjectionable functioning, the hydraulic system has to be bled properly.**

The main control spool (2) in the main valve is held in the zero or initial position by the springs or by means of pressurization. In the initial position, the two spring chambers (6) and (8) are connected with the tank in a depressurized form via the pilot control valve (4). The pilot control valve is supplied with pilot oil via the control line (7). Supply can be effected internally or externally (externally via port X).

Upon actuation of the pilot control valve, e.g. solenoid "a", the pilot control spool (10) is moved to the left and thus, the spring chamber (8) is pressurized with pilot pressure. The spring chamber (6) remains depressurized.

The pilot pressure acts on the left side of the main control spool (2) and moves it against the spring (3.1). This connects ports P with B and A with T in the main valve.

When the solenoid is switched off, the pilot control spool returns into the initial position (except for impulse spool). The spring chamber (8) is unloaded to the tank. The pilot oil from the spring chamber is displaced into channel Y via the pilot control valve.

The pilot oil supply and return can be effected internally or externally.

The manual override (9) allows the control spool (10) to be moved without solenoid energization.

### Notice:

The main control spool (2) is held in a central position by the return springs (3.1) and (3.2) in spring chambers (6) and (8) without pilot pressure, even if the valve is positioned for example vertically.

**Due to the design principle, internal leakage is inherent to the valves, which may increase over the life cycle.**

## Pilot oil supply

### Type H-WEH...

The pilot oil supply is effected **externally** via the X channel from a separate pressure supply.

The pilot oil return is effected **externally** via the Y channel into the tank.

### Type H-WEH...E...

The pilot oil supply is effected **internally** from the P channel of the main valve.

The pilot oil return is effected **externally** via the Y channel into the tank. In the subplate, port X is closed.

### Type H-WEH...ET...

The pilot oil supply is effected **internally** from the P channel of the main valve.

The pilot oil return is effected **internally** via the T channel into the tank. In the subplate, ports X and Y are closed.

### Type H-WEH...T...

The pilot oil supply is effected **externally** via the X channel from a separate pressure supply.

The pilot oil return is effected **internally** via the T channel into the tank. In the subplate, port Y is closed.

### Throttle insert

The use of the throttle insert (2) is necessary if the pilot oil supply in the P channel of the pilot control valve is to be limited (see below).

- 1 Pilot control valve
- 2 Throttle insert
- 3 Main valve

## Technical data

(for applications outside these values, please consult us!)

Hydraulic fluid	Classification	Suitable sealing materials	Standards	Data sheet
Mineral oils	HL, HLP, HLPD, HVLP, HVLDPD	NBR, FKM	DIN 51524	90220
Bio-degradable	► Insoluble in water	HETG	ISO 15380	90221
		HEES		
	► Soluble in water	HEPG	ISO 15380	
Flame-resistant	► Containing water	HFC (Fuchs: Hydrotherm 46M, Renosafe 500; Petrofer: Ultra Safe 620; Houghton: Safe 620; Union: Carbide HP5046)	ISO 12922	90223

### Important notice on hydraulic fluids:

- For further information and data on the use of other hydraulic fluids, please refer to the data sheets above or contact us.
- There may be limitations regarding the technical valve data (temperature, pressure range, life cycle, maintenance intervals, etc.).
- The ignition temperature of the hydraulic fluid used must be 50 K higher than the maximum surface temperature.
- **Bio-degradable and flame-resistant – containing water:**  
If components with galvanic zinc coating (e.g. version "J3" or "J5") or parts containing zinc are used, small amounts of dissolved zinc may get into the hydraulic system and cause accelerated aging of the hydraulic fluid. Zinc soap may form as a chemical reaction product, which may clog filters, nozzles and solenoid valves – particularly in connection with local heat input.

### ► Flame-resistant – containing water:

- Due to increased cavitation tendency with HFC hydraulic fluids, the life cycle of the component may be reduced by up to 30% as compared to the use with mineral oil HLP. In order to reduce the cavitation effect, it is recommended – if possible specific to the installation – to back up the return flow pressure in ports T to approx. 20% of the pressure differential at the component.
- Dependent on the hydraulic fluid used, the maximum ambient and hydraulic fluid temperature must not exceed 50 °C. In order to reduce the heat input into the component, a maximum duty cycle of 50% in continuous operation has to be set for on/off valves (measuring period 300 s). If this is not possible due to the function, an energy-reducing control of these components is recommended, e.g. via a PWM plug-in amplifier.

- 1) Suspended installation leads to a higher sensitivity to contamination. Horizontal positioning is recommended. Valves with hydraulic control spool return "H" and symbol C, D, K, Z, Y require horizontal positioning.
- 2) Symbol S only for NG16
- 3) For symbols C, F, G, H, P, T, V, Z, an internal pilot oil supply without preload valve is only possible if the flow from P → T in the central position (for 3 spool position valve) or while crossing the central position (for 2 spool position valve) is so large that the pressure differential of P → T reaches a value of at least 7.5 bar. At a pressure differential below 7.5 bar, a check valve with a cracking pressure of 7.5 bar must be installed in the return line to the tank. Pilot oil return Y must be realized

externally.

- 4) For symbols C, F, G, H, P, T, V, Z, S <sup>2)</sup> – by means of a preload valve or a correspondingly high volume flow
- 5) The cleanliness classes specified for the components must be adhered to in hydraulic systems. Effective filtration prevents faults and simultaneously increases the life cycle of the components.

Available filters can be found at [www.boschrexroth.com/filter](http://www.boschrexroth.com/filter).

**Technical data**

(for applications outside these values, please consult us!)

Electric			
Voltage type		Direct voltage	Alternating voltage
Available voltages	V	24, 48, 110	110, 230
Voltage tolerance (nominal voltage)	%	±10	
Admissible residual ripple	%	< 5	–
Duty cycle / operating mode according to VDE 0580		S1 (continuous operation)	
Switching time according to ISO 6403		See page 13	
Maximum switching frequency	1/h	15000	7200
Nominal power at ambient temperature of 20 °C	W	17	
Maximum power with 1.1 x nominal voltage and an ambient temperature of 20 °C	W	20.6	
Protection class according to EN 60529		IP66 (with correctly installed electrical connection)	

**Notice:**

Solenoids for AC voltage are DC solenoids with integrated rectifier.

<b>Information on explosion protection</b>		
Area of application according to Directive 2014/34/EU	II 2G	II 2D
Type of protection of valve according to EN 80079-36 <sup>6)</sup>	Ex h IIC T4 Gb X	Ex h IIIC T115°C Db X
Maximum surface temperature <sup>7)</sup>	°C	115
Temperature class	T4	–

Type examination certificate, solenoid coil	BVS 20 ATEX E 009 X	
"IECEx Certificate of Conformity" for solenoid coil	IECEx BVS 20.0007X	

<sup>6)</sup> Ex h: structural safety c according to EN 80079-37.

<sup>7)</sup> Surface temperature > 50 °C, provide contact protection.

**Special application conditions for safe application:**

- ▶ Connection lines must be passed in a strain-relieved way. The first mounting point must be within 150 mm of the cable and line entry.
- ▶ In case of valves with two solenoids, maximally one of the solenoids may be energized at a time.
- ▶ The maximum temperature of the surface of the valve jacket is 115 °C. This has to be considered when selecting the connection cable and/or contact of the connection cable with the surface of the jacket is to be prevented.

## Switching times

Pilot pressure		bar	70	250	Spring
			ON		OFF
NG10	► Without throttle insert	ms	50 ... 70	50 ... 70	30 ... 40
	► With throttle insert	ms	70 ... 100	60 ... 80	30 ... 40
NG16	► Without throttle insert	ms	60 ... 90	50 ... 70	60 ... 90
	► With throttle insert	ms	120 ... 140	90 ... 110	60 ... 90
NG25	► Without throttle insert	ms	80 ... 110	60 ... 80	110 ... 140
	► With throttle insert	ms	210 ... 260	130 ... 160	110 ... 140
NG32	► Without throttle insert	ms	90 ... 140	80 ... 110	150 ... 170
	► With throttle insert	ms	430 ... 570	240 ... 360	150 ... 170

### Notice:

- Switching time (= Contacting at the pilot control valve until the start of opening of the control edge in the main valve and change in the control spool stroke by 95%)
- The switching times are measured according to ISO 6403 with HLP46,  $\vartheta_{oil} = 40\text{ °C} \pm 5\text{ °C}$ .  
With different oil temperatures, variations may occur.
- The switching times increase by approx. 30 ms if the pressure reducing valve "D3" is used.
- The switching times have been determined under ideal conditions and may differ in the system, depending on the application conditions.

### Free flow cross-sections in zero position with symbols Q, V and W

Symbol <b>Q</b>	A – T, B – T	mm <sup>2</sup>	13	32	78	83	78
Symbol <b>V</b>	A – T, B – T	mm <sup>2</sup>	13	32	73	83	73

**Important notices see page 20.**

**Performance limits:** important notices

**Notice** (applies to all sizes):

The specified switching power limits are valid for use with two directions of flow (e.g. from P to A and simultaneous return flow from B to T at a ratio of 1:1). Due to the flow forces acting within the valves, the admissible switching power limit may be considerably lower with only one direction of flow (e.g. from P to

A while port B is blocked, with flow in the same or different directions)!  
In such cases, please consult us.

**The switching power limit has been established while the solenoids were at operating temperature, at 10% undervoltage and without tank preloading.**

NG16	<ul style="list-style-type: none"><li>▶ With pilot oil supply <b>X internal</b>, a preload valve has to be used for volume flows &lt; 160 l/min due to the negative overlap of symbols C, V and HC, HZ.</li><li>▶ With pilot oil supply <b>X internal</b>, a sufficient volume flow has to be ensured due to the negative overlap of symbols F, G, H, P, S and T (for the determination of the required volume flow, see "Preload valve" characteristic curves (page 26).   - ▶ NG25: ISO 4401-08-08-0-05
  - ▶ NG32: ISO 4401-10-09-0-05
- 7 Name plate pilot control valve
- 8 Name plate of complete valve
- 9 Seal rings
- 10 2 spool position valves with spring end position in the  
main valve (symbols C, D, K, Z)
- 11 2 spool position valves with spring end position  
in main valve (symbol Y)
- 12 3 spool position valves, spring-centered  
2 spool position valves with hydraulic end position in the  
main valve
- 13 Locking pin
- 14 Manual override "N"
- 15 Space required to remove the solenoid coil

**Subplates** (separate order) with porting pattern according to ISO 4401 see data sheet 45100.

### Notice:

Subplates are no components in the sense of Directive 2014/34/EU and can be used after the manufacturer of the overall system has conducted an assessment of the risk of ignition. The "G...J3" versions are free from aluminum and/or free from magnesium and galvanized.

### Valve mounting screws (separate order)

Size	Quantity	Hexagon socket head cap screws	Material number
10	4	ISO 4762 - M6 x 45 - 10.9 Friction coefficient $\mu_{\text{total}} = 0.09 \dots 0.14$ ; tightening torque $M_A = 12.5 \text{ Nm} \pm 10\%$	R913043777
16	4	ISO 4762 - M10 x 60 - 10.9 Friction coefficient $\mu_{\text{total}} = 0.09 \dots 0.14$ ; tightening torque $M_A = 58 \text{ Nm} \pm 10\%$	R913014770
	2	ISO 4762 - M6 x 60 - 10.9 Friction coefficient $\mu_{\text{total}} = 0.09 \dots 0.14$ ; tightening torque $M_A = 12.5 \text{ Nm} \pm 10\%$	R913043410
25	6	ISO 4762 - M12 x 60 - 10.9 Friction coefficient $\mu_{\text{total}} = 0.09 \dots 0.14$ ; tightening torque $M_A = 100 \text{ Nm} \pm 10\%$	R913015613
32	6	ISO 4762 - M20 x 80 - 10.9 Friction coefficient $\mu_{\text{total}} = 0.09 \dots 0.14$ ; tightening torque $M_A = 340 \text{ Nm} \pm 10\%$	R913008472

## Switching time adjustment

The switching time of the main valve (1) is influenced by the use of a twin throttle check valve (2) (type Z2FS 6).

- 3 Supply control
- 4 Discharge control

**Type H-WEH 10 ..4X/...S**  
**Type H-WEH 10 ..4X/...S2**

## Pressure reducing valve "D3"

With the design internal pilot oil supply ("ET"; "E") or external pilot oil supply and a pilot pressure of more than 250 bar, the valve must be ordered with a pressure reducing valve (5), type ZDR 6 PO, and a throttle insert "B10".

Ordering code: "B10..D3"

**Type H-WEH 10 ..4X/.../..D3**

## Preload valve (not for NG10)

In case of valves with depressurized circulation and internal pilot oil supply, the installation of a preload valve is required in channel P of the main valve in order to build up the minimum pilot pressure.

The pressure differential of the preload valve is to be added to the pressure differential of the main valve (see characteristic curves) to result in one total value. The cracking pressure amounts to approx. 4.5 bar.

**$\Delta p-q_v$  characteristic curve** (measured with HLP46,  $\vartheta_{oil} = 40 \pm 5 \text{ } ^\circ\text{C}$ )

- 1 NG16
- 2 NG25
- 3 NG32

Electrical connection

The type-examination tested solenoid coil of the valve is equipped with a terminal box, a type-examination tested cable entry and a type-examination tested blind plug. The connection is polarity-independent. Solenoids to be connected to AC voltage are equipped with an integrated rectifier.

 **Notice:**  
When establishing the electrical connection, the protective grounding conductor (PE  $\perp$ ) has to be connected properly.

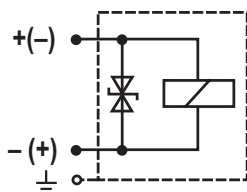

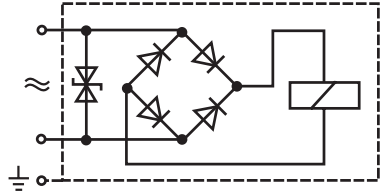

Properties of the connection terminals and mounting elements

Position	Function	Connectable line cross-section
1	Operating voltage connection	single-wire 0.75 ... 2.5 mm <sup>2</sup> finely stranded 0.75 ... 1.5 mm <sup>2</sup>
2	Connection for protective grounding conductor	single-wire max. 2.5 mm <sup>2</sup> finely stranded max. 1.5 mm <sup>2</sup>
3	Connection for potential equalization conductor	single-wire max. 6 mm <sup>2</sup> finely stranded max. 4 mm <sup>2</sup>

Connection line

Line type	non-armored and non-shielded connection lines	
Temperature rating	°C	≤-20 ... ≥+110
Line diameter	mm	7 ... 10.5

Direct voltage, polarity-independent	Alternating voltage
	

 **Notice:**  
Only use finely stranded conductors if they have pressed-on wire end ferrules.

## Electrical connection

### Over-current fuse and switch-off voltage peaks

Voltage data in the valve type code	Nominal voltage, valve solenoid	Rated current, valve solenoid	Rated current, external miniature fuse: Medium time-lag (M) according to DIN 41571 and EN/IEC 60127	Rated voltage, external miniature fuse: Medium time-lag (M) according to DIN 41571 and EN/IEC 60127	Maximum voltage value when switching off	Interference protection circuit
G24	24 V DC	0.708 A DC	800 mA	250 V	-90 V	Suppressor diode Bi-directional
G48	48 V DC	0.354 A DC	400 mA	250 V	-200 V	
G110	110 V DC	0.155 A DC	200 mA	250 V	-390 V	
W110R	110 V AC	0.163 A AC	200 mA	250 V	-3 V	Bridge rectifier and Suppressor diode
W230R	230 V AC	0.078 A AC	80 mA	250 V	-3 V	

#### Notice:

A fuse which corresponds to the rated current according to DIN 41571 and EN / IEC 60127 has to be connected upstream of every valve solenoid (max.  $3 \times I_{\text{rated}}$ ).  
The shut-off threshold of the fuse has to match the prospective short-circuit current of the supply source.

The short-circuit current of the supply source to be expected may amount to a maximum of 1500 A.

This fuse may only be installed outside the potentially explosive atmospheres or must be of an explosion-proof design.  
When inductivities are switched off, voltage peaks result which may cause faults in the connected control electronics.
