## Function, section, symbols

### General

The 2-way cartridge valves for pressure control functions are pilot operated poppet or spool valves. The main component designed as a cartridge valve (1) is inserted into a cavity which is standardised to DIN ISO 7368 and is sealed by the control cover (2).

The pilot valve (4) for either manual or electrical proportional pressure control is integrated into the control cover (2) or mounted onto the control cover (2) as a pilot valve with interface connections to DIN 24 340.

By combining the cartridge valve with the control covers different pressure functions can be realised.

### Pressure relief function

#### Control cover type LFA..DB...

#### Cartridge valve type LC..DB...

The cartridge valve (1) for the pressure relief function (type LC . DB...) is a poppet valve without an area differential (no effective area at port B). The pressure acting at port A is fed via the pilot supply orifice (5) to the spring side (6) of the element. At pressures below the setting of pilot valve (4) the forces on spool (3) are balanced and the spool remains closed due to the spring force. On reaching the set pressure, spool (3) opens and limits the pressure at port A in relation to the pressure-flow characteristics.

Type LFA..DB...

Type LC..DB...

### Pressure reducing function

#### a) Normally open: Control cover type LFA..DB...

#### Cartridge valve type LC..DR...

The cartridge valve for the pressure reducing function is a spool valve without an area differential (no effective area at port B).

The same types of cover are used as pilot valves that are used for the pressure relief functions (type LFA..DB...).

The pressure acting at port A is fed to the spring side of the spool via the pilot oil supply orifice. Below the performance limit and pressure set at the pilot valve, the spool is pressure-balanced and is held open by the spring force, so that oil is free to flow from port B to port A.

On reaching the set pressure, the spool closes and reduces the pressure at port A in relation to the pressure-flow characteristics.

E.g.

Type LFA..DB...

Type LC..DR40...

## Function, symbols

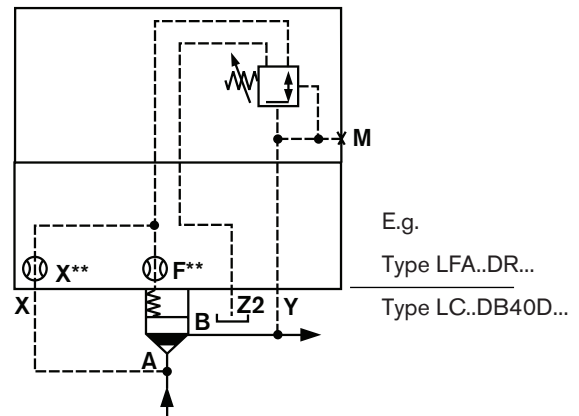

### b) Normally closed: Control cover type LFA..DR...

#### Cartridge valve type LC..DB40D...

For the pressure reducing function with opening characteristics a pressure relief valve cartridge (type LC..DB40D...) and a control cover with a pressure reducing valve (type LFA..DR...) as the pilot valve are used. The pilot oil is fed from port A via the pilot supply orifice and the open pilot valve to side B.

The main spool opens and allows free-flow from port A to port B.

On reaching the set pressure, the spool closes and reduces the pressure at port B in relation to the pressure-flow characteristics. Possible excess pressures occurring on the secondary side are led away to tank via the third port of the pilot valve. By fitting a directional valve, an additional isolating function can also be attained (type LFA..DRW...).

### Pressure sequencing function

#### Control cover type LFA..DZ...

#### Cartridge valve type LC..DB...

This function enables a pressure-dependent sequencing of a second system.

The required sequencing pressure is set by the pilot valve which is integrated into the control cover.

The pilot oil supply may be either external (pilot oil port X) or internal (from port A via pilot oil port X or Z2).

The spring chamber of the pilot control is drained at zero pressure via ports Y or Z1 to tank.

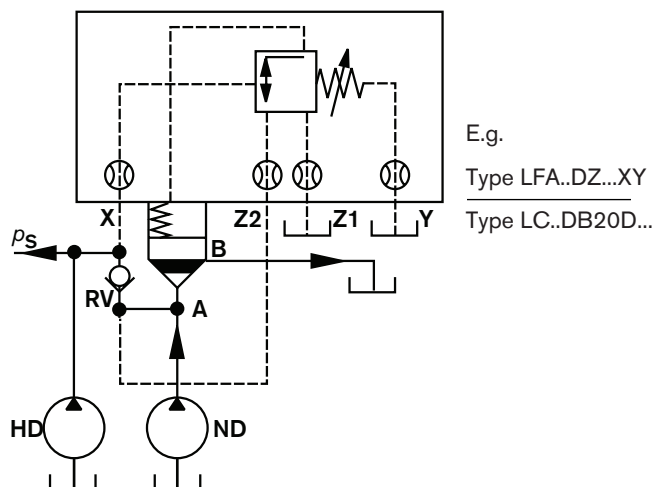

When the pressure set at the pilot control spring is reached, the pilot valve switches and unloads the spring chamber of the main valve to tank. The main spool opens and makes the connection from port A to B possible.

In version LFA..DZW..., the required spool position may be selected by means of an electrically operated pilot valve (not included with the scope of control cover LFA..DZW... supply) in addition to the normal hydraulic control.

### Circuit examples

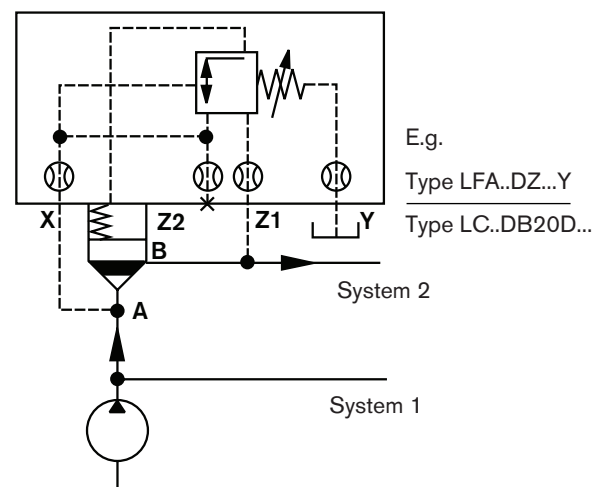

**Example 1:** (circuit for the pressure dependent unloading of the low pressure system)

In the circuit shown, the system is fed by a high pressure pump and a low pressure pump. The system pressure  $p_s$  acts externally from the high pressure side via the pilot oil port X on the pilot valve which, on reaching the set pressure, switches the low pressure side to give zero pressure circulation. The check valve RV (not included within the scope of supply) prevents the high pressure system from flowing into the low pressure system which is now at zero pressure.

**Example 2:** (circuit for the pressure dependent sequencing of a 2nd system)

With this circuit, oil is allowed to flow into system 2 when the pressure in system 1 has reached a pre-set value. The pilot oil supply is internal from port A of the main valve.

## Installation cavity and porting pattern to DIN ISO 7368 - dimensions in mm (inches)

$$X = \sqrt{R_{\max} 4}$$

$$Y = \sqrt{R_{\max} 8}$$

$$Z = \sqrt{R_z 10}$$

- 1 Depth of fit
- 2 Reference dimension
- 3 For diameters of port B other than  $\varnothing D3$  or  $(\varnothing D3^*)$ , the distance from the cover mounting surface to the centre of this hole must be calculated.
- 4 Port B may be moved about the central axis of port A. Care must however be taken to ensure that the fixing holes and control holes are not damaged.
- 5 Drilling for location pin (cover location pin fitted to DIN 24 342)
- 6 **Note on NS 16 porting pattern:**  
Length L1 (axis x-y drilling) is 80 mm.
- 7 For  $\varnothing \leq 45$  mm  $\rightarrow$  fit H8 is permitted!
- 8 Drilling for locating pin with functions as a main pressure relief valve (cover locating pin has to be appropriately relocated during assembly)

<sup>1)</sup> Max. dim.

## Technical data (for applications outside these parameters, please consult us!)

Pressure fluid	Mineral oil (HL, HLP) to DIN 51 524 <sup>1)</sup> ; Fast bio-degradable pressure fluids to VDMA 24 568 (also see RE 90 221); HETG (rape seed oil) <sup>1)</sup> ; HEPG (polyglycols) <sup>2)</sup> ; HEES (synthetic ester) <sup>2)</sup> ; Other pressure fluids on request	
<sup>1)</sup> Suitable for NBR and FKM seals		
<sup>2)</sup> Only suitable for FKM seals		
Pressure fluid temperature range	°C (°F)	– 30 to + 80 (– 86 to + 176) for NBR seals – 20 to + 80 (– 68 to + 176) for FKM seals
Viscosity range	mm <sup>2</sup> /s (SUS)	2.8 to 380 (13 to 1761)
Cleanliness class to ISO code	Maximum permissible degree of contamination of the pressure fluid is to ISO 4406 (C) class 20/18/15 <sup>3)</sup>	

## 2-way cartridge valve

Maximum operating pressure – Ports A and B	bar (PSI)	420							
Maximum flow (recommended)	NS	16	25	32	40	50	63	80	100
– Poppet valve cartridges „E“ and „A“	L/min (GPM)	300 (79)	450 (119)	600 (159)	1000 (264)	1600 (423)	2500 (660)	4500 (1189)	7000 (1849)
– Spool valve cartridges „D“ and „B“	L/min (GPM)	175 (46)	300 (79)	450 (119)	700 (184)	1400 (370)	1750 (462)	3200 (845)	4900 (1294)

<sup>3)</sup> The cleanliness class stated for the components must be adhered too in hydraulic systems. Effective filtration prevents faults from occurring and at the same time increases the component service life.  
For the selection of filters see catalogue sheets RE 50 070, RE 50 076 and RE 50 081.

## Characteristic curves: NS 16 - measured with HLP 46; $\vartheta_{oil} = 40\text{ °C (104°F)} \pm 5\text{ °C (41°F)}$

The characteristic curves were measured with an external pilot oil drain at zero pressure. With an internal pilot oil drain the inlet pressure is increased by the pressure being applied at port B.

Manual pressure adjustment, type LFA 16 DB... and type LFA 16 DBW...

Electrical proportional pressure adjustment, type LFA 16 DBE...

## Characteristic curves: NS 25 - measured with HLP 46; $\vartheta_{oil} = 40\text{ }^{\circ}\text{C}$ (104°F) $\pm 5\text{ }^{\circ}\text{C}$ (41°F)

The characteristic curves were measured with an external pilot oil drain at zero pressure. With an internal pilot oil drain the inlet pressure is increased by the pressure being applied at port B.

**Manual pressure adjustment, type LFA 25 DB... and type LFA 25 DBW...**

**Electrical proportional pressure adjustment, type LFA 25 DBE...**

## Characteristic curves: NS 32 - measured with HLP 46; $\vartheta_{oil} = 40\text{ }^{\circ}\text{C}$ (104°F) $\pm 5\text{ }^{\circ}\text{C}$ (41°F)

The characteristic curves were measured with an external pilot oil drain at zero pressure. With an internal pilot oil drain the inlet pressure is increased by the pressure being applied at port B.

Manual pressure adjustment, type LFA 32 DB... and type LFA 32 DBW...

Electrical proportional pressure adjustment, type LFA 32 DBE...

## Characteristic curves: NS 40 - measured with HLP 46; $\vartheta_{oil} = 40^\circ\text{C}$ (104°F) $\pm 5^\circ\text{C}$ (41°F)

The characteristic curves were measured with an external pilot oil drain at zero pressure. With an internal pilot oil drain the inlet pressure is increased by the pressure being applied at port B.

Manual pressure adjustment, type LFA 40 DB... and type LFA 40 DBW...

Electrical proportional pressure adjustment, type LFA 40 DBE...

## Characteristic curves: NS 50 - measured with HLP 46; $\vartheta_{\text{oil}} = 40^\circ\text{C}$ (104°F) $\pm 5^\circ\text{C}$ (41°F)

The characteristic curves were measured with an external pilot oil drain at zero pressure. With an internal pilot oil drain the inlet pressure is increased by the pressure being applied at port B.

### Manual pressure adjustment, type LFA 50 DB... and type LFA 50 DBW...

#### Type LC 50 DB.E... (with poppet valve)

#### Type LC 50 DB.D... (with poppet spool valve)

### Electrical proportional pressure adjustment, type LFA 50 DBE...

#### Type LC 50 DB.E... (with poppet valve)

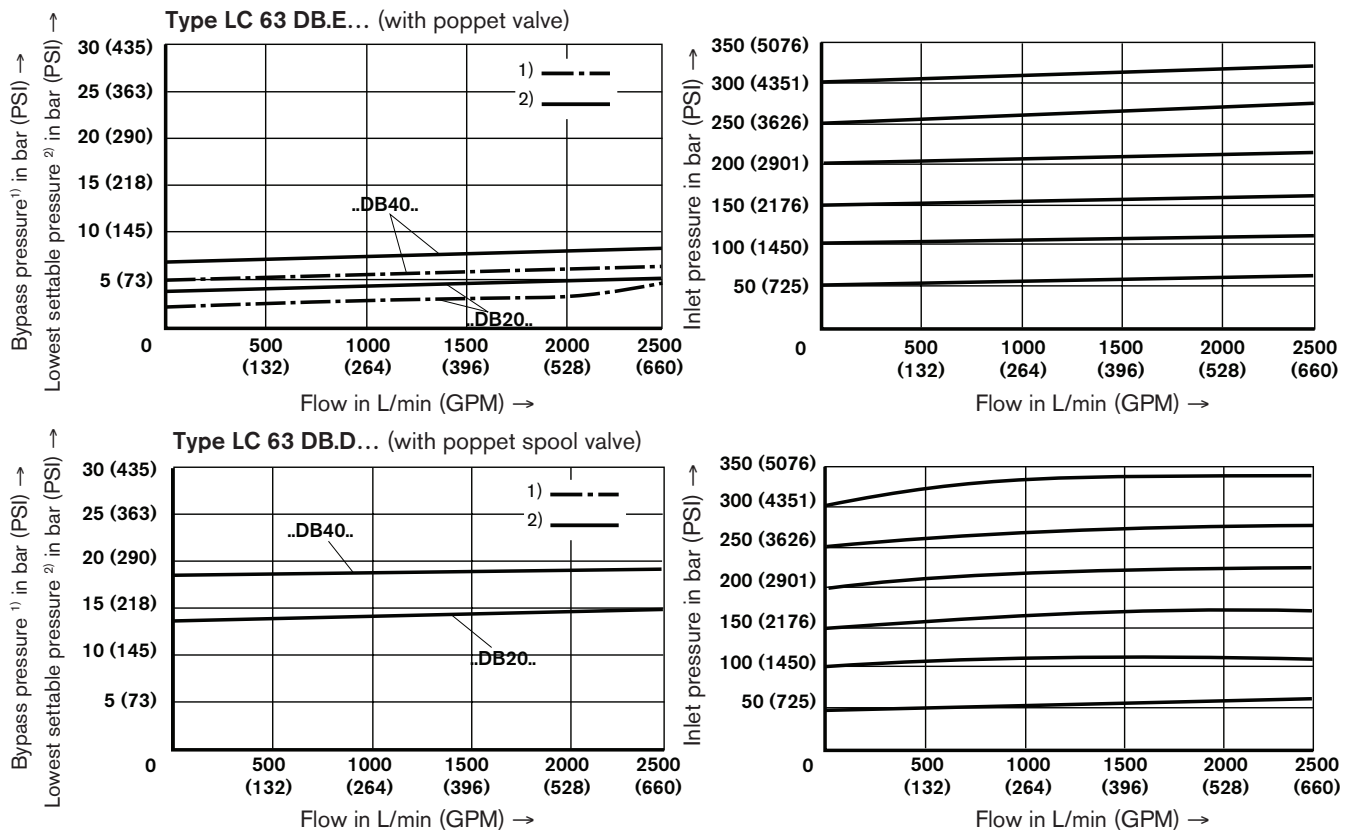

#### Type LC 50 DB.D... (with poppet spool valve)

## Characteristic curves: NS 63 - measured with HLP 46; $\vartheta_{oil} = 40\text{ °C (104°F)} \pm 5\text{ °C (41°F)}$

The characteristic curves were measured with an external pilot oil drain at zero pressure. With an internal pilot oil drain the inlet pressure is increased by the pressure being applied at port B.

Manual pressure adjustment, type LFA 63 DB... and type LFA 63 DBW...

Electrical proportional pressure adjustment, type LFA 63 DBE...

<sup>1)</sup> These springs require an additional installation length.  
When using standard control covers an additional sandwich plate type LFA..D22... must be used.

### Exception:

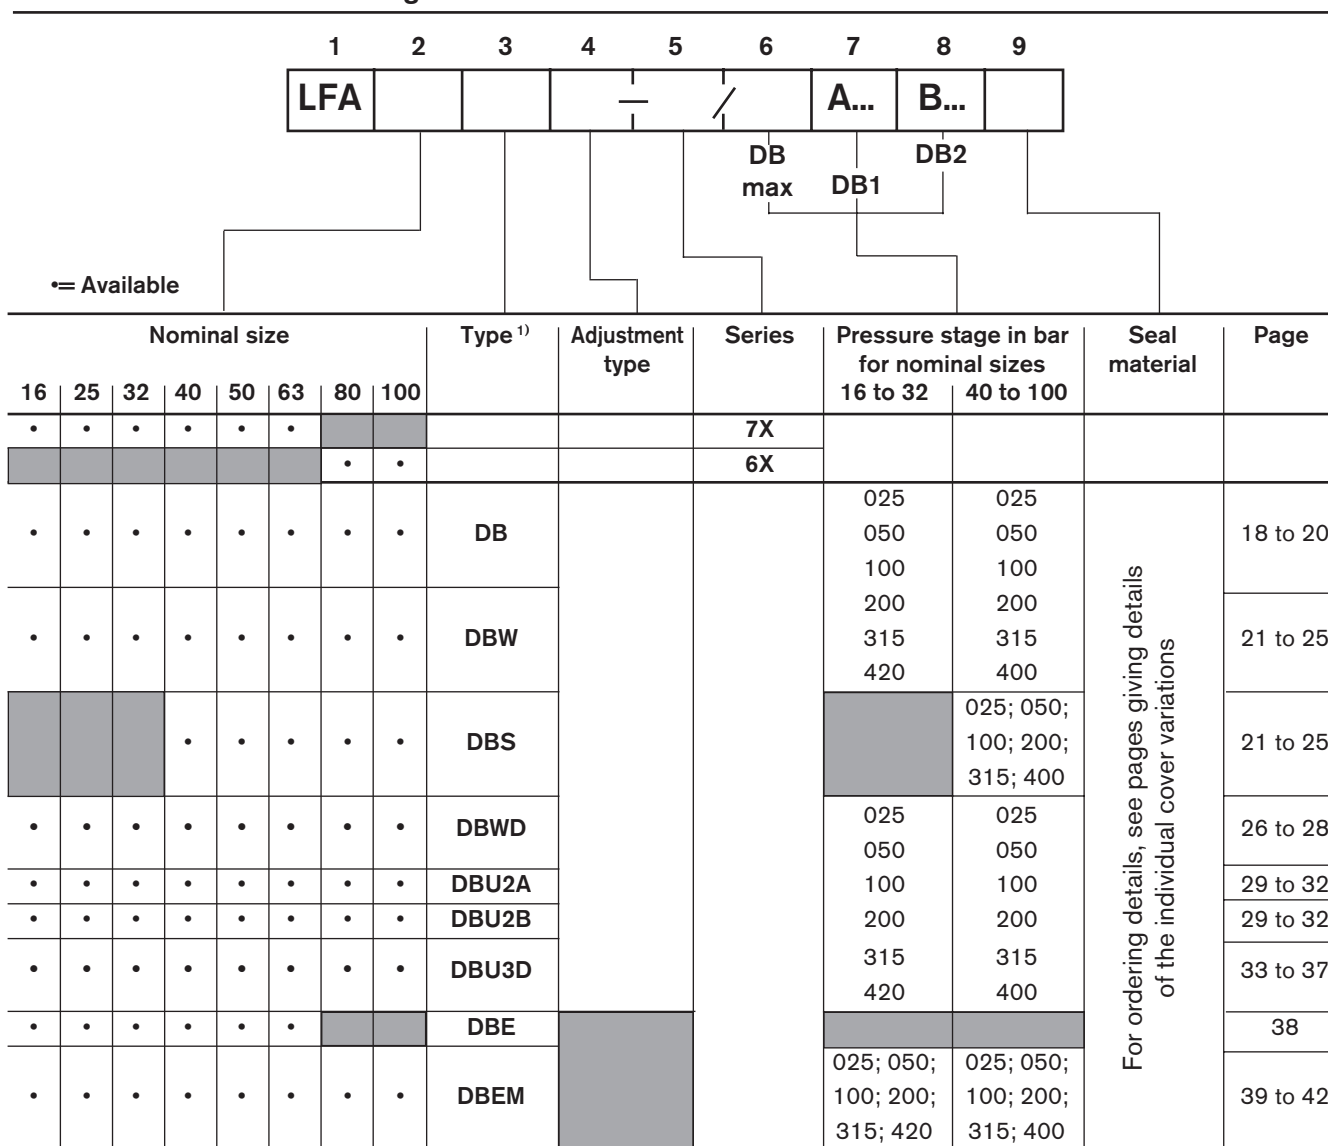

Control cover type "D" can be replaced by type LFA..D8-../F (no sandwich plate required).

## Standard types

Typ LC (Einbauventil)	Material-Number
LC 16 DB40E7X/	R900912532
LC 16 DB40D7X/	R900912547
LC 40 DB40E7X/	R900927969
LC 40 DB40D7X/	R900938014
LC 50 DB40E7X/	R900938041
LC 50 DB40D7X/	R900938040
LC 63 DB40E7X/	R900938070
LC 63 DB40D7X/	R900938069

Typ LFA (Steuerdeckel)	Material-Number
LFA 16 DB2-7X/315	R900912757
LFA 32 DB2-7X/315	R900912768
LFA 40 DB2-7X/315	R900927972
LFA 50 DB2-7X/315	R900938163
LFA 63 DB2-7X/315	R900938230
LFA 16 DBW2-7X/315	R900912805
LFA 25 DBW2-7X/315	R900912810
LFA 32 DBW2-7X/315	R900912815
LFA 40 DBW2-7X/315	R900938096
LFA 50 DBW2-7X/315	R900938191
LFA 63 DBW2-7X/315	R900938238

### General notes on the ordering details for control covers

<sup>1)</sup> For functions, see selection table on page 15

### Adjustment types for pressure relief valves

- 1 = Rotary knob
- 2 = Hexagon with protective cap
- 3 = Lockable rotary knob with scale  
(H-key to automotive industry standards)
- 4 = Rotary knob with scale, not lockable

## Series

**7X** = Series 70 to 79 and

**6X = Series 60 to 69**

(unchanged installation and connection dimensions)

## Pressure stages

Dependent on the nominal size and permissible working pressure of the pilot valve. For further details see ordering details for the control cover.

Pressure data for DB1, only required for types DBU2 and DBU3D

Pressure data for DB2, only required for type DBU3D

### Ordering example for type DBU3D

.../315\* A 100 B 200 (DB max /DB1/DB2)

\*DB max. always first

The control covers are always fitted with a, optimised on our test rig, standard orifice. Orifice details are therefore not required in the type code. Deviating operating conditions could make it necessary to match the orifice size. The orifices are of the threaded type.

Orifice as shown within the main symbol

**General notes on the ordering details for control covers: pilot control valve (max. operating pressure)**

Pilot control valve		Control cover		Max. operating pressure in bar Y, T			Included in type code	Has to be specially ordered

<sup>1)</sup> Possible pressure stages: 25, 50, 100, 200, 315, 420

<sup>2)</sup> Possible pressure stages: 25, 50, 100, 200, 315, 400

<sup>3)</sup> Possible pressure stages: 50, 100, 200, 315, 350  
1 = G 1/4 threaded connection T; special poppet

**Note:** By combining a 2-way cartridge valve with a pilot control valve, various valve functions can be obtained.

The following components may be considered with porting pattern form A6 (up to NS 63) and form A10 (NS 80 to 100) DIN 24 340.

**Valve fixing screws** are included within the control cover scope of supply.

**Fixing screws: S.H.C.S. to DIN 912-10.9**

Pilot control valve Type	Dimensions	Tightening torque in Nm	Pilot control valve Type	Dimensions	Tightening torque in Nm
M-3SEW 6 ...	M5 x 45	8.9	.WE 6 ...	M5 x 50	8.9
M-3SEW 10 ...	M6 x 40	15.5	.WE 10 ...	M6 x 40	15.5
M-3SED 6 ...	M5 x 50	8.9	DBET ...	M5 x 30	8.9
M-3SED 10 ...	M6 x 40	15.5			

**Technical data** (for applications outside these parameters, please consult us!)

Maximum operating pressure	bar (PSI)	420 (6092) <b>Attention:</b> $p_{max}$ Take the pilot control valve into account!
Pressure fluid		Mineral oil (HL, HLP) to DIN 51 524 <sup>1)</sup> ; Fast bio-degradable pressure fluids to VDMA 24 568 (also see RE 90 221); HETG (rape seed oil) <sup>1)</sup> ; HEPG (polyglycols) <sup>2)</sup> ; HEES (synthetic ester) <sup>2)</sup> ; Other pressure fluids on request
<sup>1)</sup> Suitable for NBR and FKM seals <sup>2)</sup> <b>Only</b> suitable for FKM seals		
Pressure fluid temperature range	°C (°F)	– 30 to + 80 (–86 to + 176) for NBR seals – 20 to + 80 (–68 to + 176) for FKM seals
Viscosity range	mm <sup>2</sup> /s (SUS)	2.8 to 380 (12.98 to 1761)
Cleanliness class to ISO code		Maximum permissible degree of contamination of the pressure fluid is to ISO 4406 (C) class 20/18/15 <sup>3)</sup>

<sup>3)</sup> The cleanliness class stated for the components must be adhered too in hydraulic systems. Effective filtration prevents faults from occurring and at the same time increases the component service life.  
For the selection of filters see catalogue sheets RE 50 070, RE 50 076 and RE 50 081.

<sup>1)</sup> Closing pressure 3.0 bar only for NS 16 for mounting a pilot operated pressure relief valve type DBC . -5X/...SO187 (see catalogue sheet RE 25 802)

<sup>2)</sup> Only for NS 16, 25 and 32

<sup>3)</sup> Special installation space is required (see page 47)

**Symbol:** cartridge valves

Type LC..DR..

**Technical data** (for applications outside these parameters, please consult us!)

Maximum operating pressure – Ports A and B	bar (PSI)	315 (4569)					
Maximum flow (recommended)	NS	16	25	32	40	50	63
– LC..DR20.../..	L/min (GPM)	100 (26)	200 (53)	300 (79)	750 (198)	1000 (264)	1600 (423)
– LC..DR40.../..	L/min (GPM)	150 (40)	300 (79)	450 (119)	1000 (264)	1300 (343)	2000 (528)
Pressure fluid		Mineral oil (HL, HLP) to DIN 51 524 <sup>1)</sup> ; Fast bio-degradable pressure fluids to VDMA 24 568 (also see RE 90 221); HETG (rape seed oil) <sup>1)</sup> ; HEPG (polyglycols) <sup>2)</sup> ; HEES (synthetic ester) <sup>2)</sup> ; other pressure fluids on request					
<sup>1)</sup> Suitable for NBR and FKM seals							
<sup>2)</sup> Only suitable for FKM seals							
Pressure fluid temperature range	°C (°F)	– 30 to + 80 (– 86 to + 176) for NBR seals					
		– 20 to + 80 – 68 to +176) for FKM seals					
Viscosity range	mm <sup>2</sup> /s (SUS)	2.8 to 380 (13 to 1761)					
Cleanliness class to ISO code		Maximum permissible degree of contamination of the pressure fluid is to ISO 4406 (C) class 20/18/15 <sup>3)</sup>					

<sup>3)</sup> The cleanliness class stated for the components must be adhered too in hydraulic systems. Effective filtration prevents faults from occurring and at the same time increases the component service life. For the selection of filters see catalogue sheets RE 50 070, RE 50 076 and RE 50 081.

Preferably use 5 and 8 bar springs for flow control. The usable  $\Delta p$  is available on request.

### Attention!

2-way cartridge valves type LC..DR... are combined with control covers type LFA..DB... (for ordering details see page 13).

## Overview of symbols (basic symbols) - pressure reducing function

Valid symbols are shown in the following type descriptions !

**LFA..DR-.../...**  
**NS 16 to 63**

Control cover with manual pressure adjustment  
Port T - zero pressure

See pages 53; 54

**LFA..DRW-.../...**  
**NS 16 to 63**

Control cover with manual pressure adjustment and isolating function  
Port T - zero pressure

**3WE 6 B9-.../..**

Solenoid de-energised → closed  
Solenoid energised → pressure reducing function

See pages 55; 56

**LFA..DREV-.../...**  
**NS 25 to 63**

Control cover for electrical-proportional pressure adjustment  
Port T - zero pressure

See pages 57; 58

**LFA..DREZ-.../...**  
**NS 25 to 63**

Control cover for electrical-proportional pressure adjustment  
Port T - zero pressure

See pages 57; 58

**LFA..DREWV-.../...**  
**NS 25 to 63**

Control cover for electrical-proportional pressure adjustment and isolating function  
Port T - zero pressure

**3WE 6 A-.../..**

Solenoid de-energised → closed  
Solenoid energised → pressure reducing function

See pages 59; 60

**LFA..DREWZ-.../...**  
**NS 25 to 63**

Control cover for electrical-proportional pressure adjustment and isolating function  
Port T - zero pressure

**3WE 6 A-.../..**

Solenoid de-energised → closed  
Solenoid energised → pressure reducing function

See pages 59; 60

The orifices built into the control covers are threaded type orifices. These are standard orifices. No type is entered in the ordering detail.

Orifice as shown within the main symbol

•	•	•	•	•	DZWA			315		see pages	65, 66	
•	•	•	•	•	DZWB			350		63 and 65	65, 66	

- 4** Adjustment type for pressure sequence valves
- 1 = Rotary knob
  - 2 = Hexagon with protective cap
  - 3 = Lockable rotary knob with scale (H-key to automotive industry standard)
  - 4 = Rotary knob with scale not lockable

- 5** Series
- 7X = Series 70 to 79  
(unchanged installation and connection dimensions)

- 7** Pilot oil supply
- No code =  
X =  
Y =  
XY =
- Ordering details to symbol (see pages 63 and 65)

For seal kits see page 62

**Attention !**

Control cover types LFA..DZ...are combined with 2-way cartridge valves type LC..DB... (for ordering details see page 5)

The orifices built into the control cover are threaded type orifices. These are standard orifices. **No** type coded is entered in the ordering code.

Orifice as shown within the main symbol

**Directional spool valve (porting pattern to DIN 24 340 form A6)**

Directional spool valve Type	NS	Catalogue sheet RE No.	Control cover Type
4WE 6 D../..	6	23 178	DZWA, DZWB

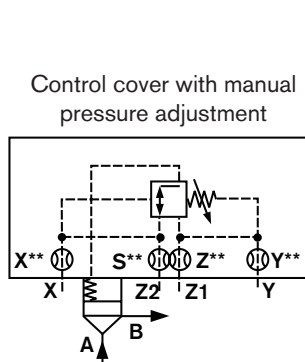

**Attention !** Pilot valves (electrical directional spool valves type 4WE 6 D...) must be ordered separately, for further details see catalogue sheet RE 23 178.

Valve fixing screws M5 x 50 DIN 912-10.9,  $M_A = 8.9 \text{ Nm}$  are included within the control cover scope of supply.

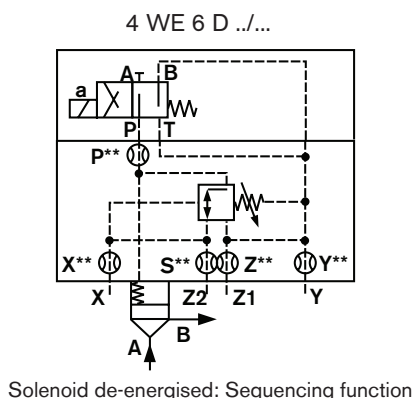

## Overview of symbols (basic symbols), pressure sequencing functions

## Control cover for pressure sequencing functions

### Technical data (for applications outside these parameters, please consult us!)

Pressure fluid	Mineral oil (HL, HLP) to DIN 51 524 <sup>1)</sup> ; Fast bio-degradable pressure fluids to VDMA 24 568 (also see RE 90 221); HETG (rape seed oil) <sup>1)</sup> ; HEPG (polyglycols) <sup>2)</sup> ; HEES (synthetic ester) <sup>2)</sup> ; Other pressure fluids on request
<sup>1)</sup> Suitable for NBR and FKM seals <sup>2)</sup> Only suitable for FKM seals	
Pressure fluid temperature range	°C (°F) – 30 to + 80 (– 86 to + 176) for NBR seals – 20 to + 80 – 68 to +176) for FKM seals
Viscosity range	mm <sup>2</sup> /s (SUS) 2.8 to 380 (13 to 1761)
Cleanliness class to ISO code	Maximum permissible degree of contamination of the pressure fluid is to ISO 4406 (C) class 20/18/15 <sup>3)</sup>

<sup>3)</sup> The cleanliness class stated for the components must be adhered too in hydraulic systems. Effective filtration prevents faults from occurring and at the same time increases the component service life.  
For the selection of filters see catalogue sheets RE 50 070, RE 50 076 and RE 50 081.

40, 50	13.00 x 2.30 x 2.62	R900017457	R900017617

## Seal kits for cartridge valves and control covers

### Seal kits for cartridge valves Type LC.. DB../... (NS 16 ... 50)

Seal kit for	Material No.	
	NBR	FKM
LC 16 DB..7X/..	R900313104	R900313107
LC 25 DB..7X/..	R900313105	R900313108
LC 32 DB..7X/..	R900313106	R900313109
LC 40 DB..7X/..	R900873022	R900873025
LC 50 DB..7X/..	R900873023	R900873026

### Seal kits for control cover Type LFA.. /... (NS 16 ... 50)

Seal kit for LFA...	Material No.									
	16		25		32		40		50	
	NBR	FKM	NBR	FKM	NBR	FKM	NBR	FKM	NBR	FKM
...DZ...	R900860006		R900311540		R900311541		R900309378		R900312089	
...DZW...										

### Fixing screws (are included within the scope of supply)

S.H.C.S. to DIN 912-10.9

NS	Qty.	Dimensions	Tightening torque in Nm
16	4	M 8 x 115	32
25	4	M 12 x 120	110
32	4	M 16 x 120	270
40	4	M 20 x 70	520
50	4	M 20 x 80	520

### Orifice thread size

all built-in orifices: M6 tapered
