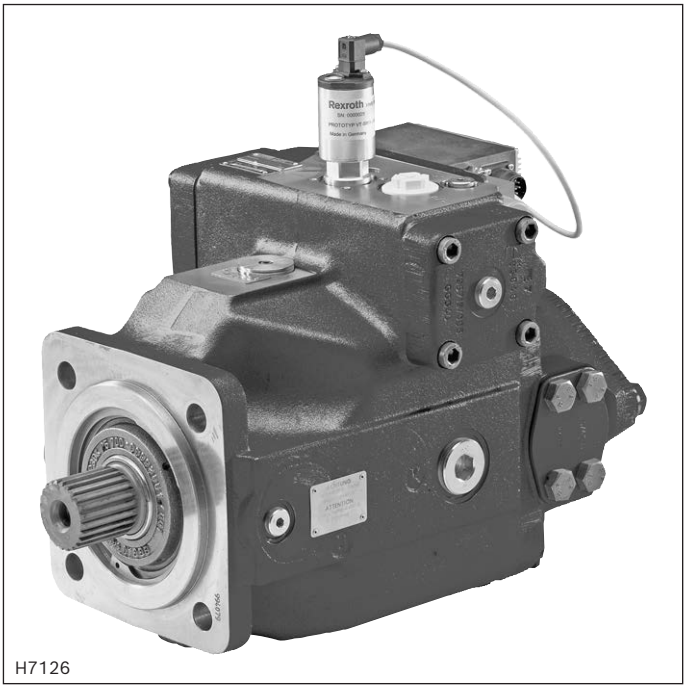
Pressure and flow control system

Type SYHDFEE, SYHDFED, SYHDFEF



H7126

- Size 40 ... 355
- Component series 1X
- Maximum operating pressure 350 bar
- With axial piston variable displacement pump type A4VSO
- Function: Swivel angle control, pressure control, torque limitation, speed control function, master-slave
- Communication: Sercos, PROFINET, EtherNET/IP, POWERLINK, VARAN, CAN over EtherCAT, ServoDrive over EtherCAT, analog

Features

The control system is used for the electro-hydraulic control of the swivel angle, pressure and power (partially optional) of an axial piston variable displacement pump.
It consists of the following components:

- Axial piston variable displacement pump type A4VSO, optimized for operation in the control system
- Proportional directional valve type VT-DFP. as a pilot control valve with integrated electronics including inductive position transducer for valve position sensing.
- Position transducer for sensing the swivel angle
- Pressure transducer with suitable signal level and dynamics (optional)

R(L)	Fluid filling + bleeding (leakage connection)
U	Flushing port
B	Pressure port
B1	2nd pressure port/additional port
MB1	Measuring port operating pressure Size 250/355: G1/4 NG 40/71/125/180: Blind flange attached to B1 with pressure measuring port G1/4

When using a pressure transducer type HM20-2X/...C13:

- Installation in MB or MB1 (pump) in connection with electronic version for actual pressure value input "F".
- For attachment of a pressure transducer type HM20-2X/315-F-C13-0.5 in MB, an adapter from M14 x 1.5 to G1/4 (material no. R900695665) is required.
- Due to the installation position, the cable version of the type HM20 pressure transducer cannot be used for all sizes without restrictions (check use with M12 extension cable).

When using an external pressure transducer:
Installation in line B (preferably close to the actuator) and electrical connection via central connection X1.

Explanation in the operating instructions (see page 44)

☞ **Notice:**
The actual pressure value at port B must not be less than 10 bar for more than 10 minutes (lubrication).

Schematic diagram: Type SYHDFE... – actuating system supplied externally

MB1	Measuring port operating pressure NG250/355: G1/4 NG 40/71/125/180: Blind flange attached to B1 with pressure measuring port G1/4
Z	External pilot oil pressure (DIN 3852; M14 x 1.5; 12 deep ($p_{max(abs)}$ = 50 bar)

Notes on external supply:

- In the case of an actuating system with external supply, the pump adjustment will – in case of voltage failure – not switch to zero stroke but to the negative stop (displacement of 100% flow from the system to the tank).
- In the case of an active fault message, it is imperative that the machine control reacts (e.g. switching off the drive motor of the pump, interrupting the external supply of the actuating system).
- The command values for pressure and flow must always be greater than zero ($p_{Command}$ ≥ 3 bar, $\alpha_{Command}$ ≥ 5%) as due to drift or tolerances, there is no exact "zero" pressure or "zero" swivel angle. Under unfavorable conditions, smaller command value presettings can lead to cavitation.
- The actual pressure value must not be less than 10 bar for more than 10 minutes (lubrication).
- Port Z must be connected to tank level in case of non-use. Closing is not admissible.

1) Maximum pressure limitation must be provided by the customer.

Maximum operating pressure [5]		bar	350					
Minimum operating pressure		bar	≥20					
Maximum inlet pressure (suction port S)		bar	≤ 30.0					
Minimum inlet pressure (suction port S)		bar	≥0.8 (absolute)					
Hydraulic fluid			Mineral oil (HL, HLP) according to DIN 51524; HFC optional (see ordering code)					
Hydraulic fluid temperature range		°C	–20 ... +70					
Maximum admissible degree of contamination of the hydraulic fluid, cleanliness class according to ISO 4406 (c)			Class 18/16/13 (for particle size ≤ 4/6/14 µm)					

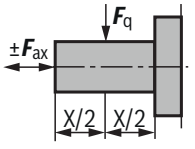
1) The values are applicable at an absolute pressure of 1 bar in suction port S. With a reduction of the displacement or an increase in the inlet pressure, the speed can be increased (see characteristic curve "Standard transmission design" page 13).

2) Does not apply to HFC fluids, formula for determining the minimum speed on page 13

3) In case of higher radial forces, please consult us. Not applicable for use of HFC fluids

4) The validity range is between the minimum required and maximum admissible speed. It applies to external excitation (e.g. diesel motor 2 ... 8 times the rotary frequency; cardan shaft twice the rotary frequency). The limit value is only valid for a single pump. The load capacity of the connection parts must be considered.

5) When using HFC fluids, also see data sheet 92053.



Technical data

Maximum operating pressure		bar	350
Minimum operating pressure		bar	≥20
Maximum inlet pressure (suction port S)		bar	≤ 30.0
Minimum inlet pressure (suction port S)		bar	≥0.8 (absolute)
Hydraulic fluid			Mineral oil (HL, HLP) according to DIN 51524 (see ordering code)
Hydraulic fluid temperature range		°C	–20 ... +70
Maximum admissible degree of contamination of the hydraulic fluid, cleanliness class according to ISO 4406 (c)			Class 18/16/13 (for particle size ≤ 4/6/14 µm)

1) The values are applicable at an absolute pressure of 1 bar in suction port S. With a reduction of the displacement or an increase in the inlet pressure, the speed can be increased (see characteristic curve "Standard transmission design" page 13).

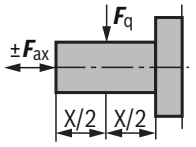
3) In case of higher radial forces, please consult us.

4) The validity range is between the minimum required and maximum admissible speed. It applies to external excitation (e.g. diesel motor 2 ... 8 times the rotary frequency; cardan shaft twice the rotary frequency). The limit value is only valid for a single pump. The load capacity of the connection parts must be considered.

6) The values are applicable at an absolute pressure of 1 bar in suction port S.

7) For suction pressure <1 bar, see characteristic curve "High-Speed transmission design" page 13. No speed increase possible when increasing the inlet pressure.

8) For V_g > 30%. For V_g ≤ 30% see "Admissible speed range" page 13)

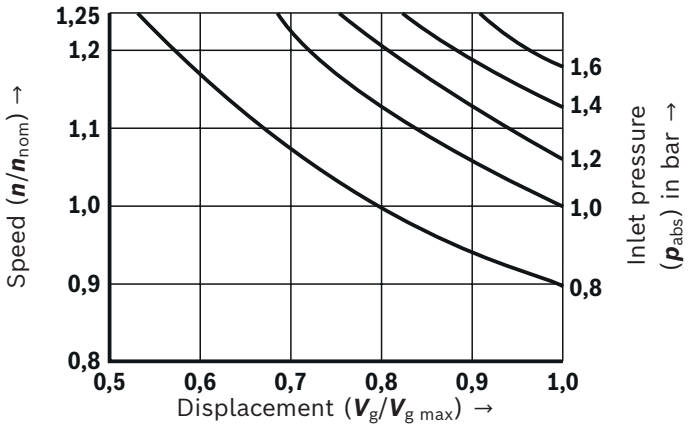


Technical data

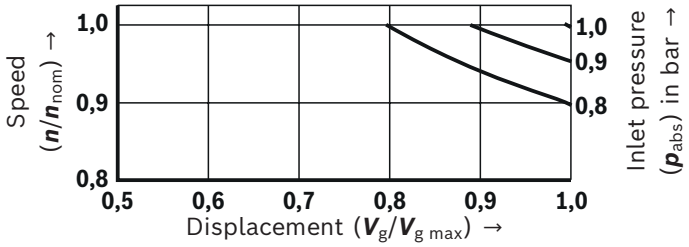
(For applications outside these values, please consult us!)

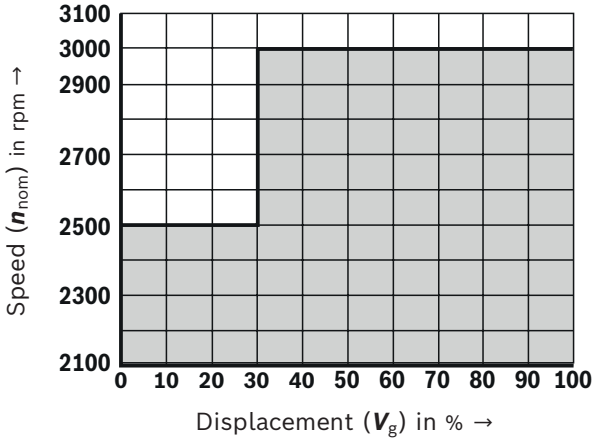
Maximum speed (speed limit)

Standard "–" transmission design



High-Speed "S" transmission design (NG71)





Admissible speed range

Determination of the minimum speed with HFC hydraulic fluid (see ordering code)

Size		71	125	180	250	355
Speed (n_0)	rpm	750	850	600	550	450
Viscosity (v_0)	mm²/s	25				

Admissible load:

$$n = n_0 \bullet \frac{v_0}{v} \bullet \left(\frac{p}{p_{Nenn}} \bullet \frac{V_g}{V_{g\,max}} \right)$$

$$x = \left(\frac{p}{p_{Nenn}} \bullet \frac{V_g}{V_{g\,max}} \right) = \frac{v}{v_0} \bullet \frac{n}{n_0}$$

When version "SYHDFED...N" ("For variable-speed operation") is used, the minimum speed can be mapped via the derating function.

- Example 1:
  The axial piston variable displacement pump type A4VSO125 can be operated with nominal load with v = 16 cSt from n = 1328 rpm.

- Example 2:
  For the axial piston variable displacement pump type A4VSO250, the admissible load with n = 500 rpm and v = 10 cSt → **x**= (10/25 • 500/550) = 0.364 (= 127 bar at $V_{g\,max}$)

$V_{g\,max}$	Maximum displacement
V_g	Displacement
v	Viscosity
v_0	Reference viscosity
n	Calculated minimum speed
n_0	Reference speed
n_{nom}	Maximum speed
n_E	Speed 1500 rpm
p	Operating pressure
p_{nom}	Nominal pressure

☞ **Notice:**
For information on environment simulation testing for the fields EMC (electro-magnetic compatibility), climate and mechanical load, see data sheet 29016.

Technical data

(For applications outside these values, please consult us!)

Bearing flushing

With the following operating conditions, bearing flushing is necessary for safe continuous operation:

- Applications with special fluids (not mineral fluids) due to limited lubricity and tight operating temperature range
- Operation with boundary conditions of temperature and viscosity with mineral oil operation

With vertical installation (drive shaft upwards), bearing flushing is recommended for lubrication of the front bearing and the shaft seal ring.
The bearing is flushed using port "U" in the area of the front flange of the variable displacement pump.
The flushing fluid flows through the front bearing and exits with the pump leakage at the leakage connection.

Recommended flushing quantities in l/min:

Size		40	71	125	180	250	355
Flushing quantity	l/min	3	4	5	7	10	15

The specified flushing quantities result in a pressure differential between port "U" (including fitting) and the leakage chamber of approx. 2 bar (series 1) and approx. 3 bar (series 3).
When using the external bearing flushing, the throttle screw in port U has to be screwed-in to the stop.

Leakage pressure

The admissible leakage pressure (housing pressure) depends on the speed (see diagram).

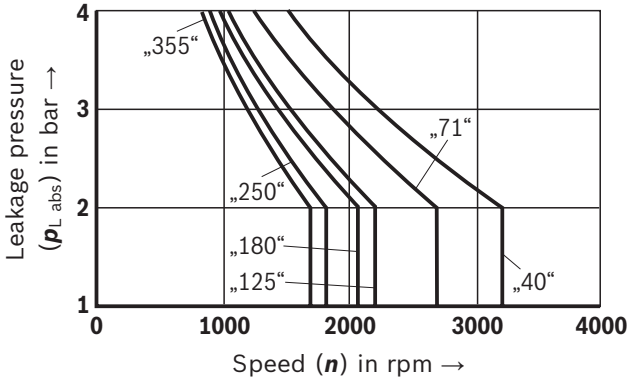
Maximum leakage pressure (housing pressure)

- 4 bar absolute

These specifications are guidelines; under special operating conditions, a limitation may become necessary.

Direction of flow:

- S → B



Electrical connection: Type SYHDFEE

Assignment of connector or mating connector and cable set "X1", central connection

Pin	Signal	Description	Signal direction	Type of signal	Assignment in cable set (accessories)	
1	$+U_B$	Supply voltage	IN	24 VDC	1	Supply line 3 x 1.0 mm²
2	0 V = L0	Reference potential supply voltage	–	–	2	
PE	Ground	Grounding connection for the electronics	–	–	green/ yellow	
3	Fault	Signals faults, e.g., cable break command/actual values, controller monitoring (logic 0 = error)	OUT	logic 24 V	white	Supply line 10 x 0.14 mm² shielded (one end of the shield must be connected to the control)
4	M0	Reference potential for analog signals	–	–	yellow	
5	$\alpha_{Command}$	Swivel angle command value	IN	analog ±10 V	green	
6	α_{Actual}	Actual swivel angle value, normalized	OUT	analog ±10 V	violet	
7	$p_{Command}$	Pressure command value	IN	analog 0 ... 10 V	pink	
8	p_{Actual}	Actual pressure value, normalized	OUT	analog 0 ... 10 V [1]	red	
9		Function depends on type of electronics and additional function, see below	–	–	brown	
10	Actual pressure value H	Actual pressure value input: Signal level depends on pos. 15 in the ordering code. With version "F" (0.5 ... 5 V) reserved	IN	analog	black	
11	Actual pressure value L		–	analog	blue	
n.c.					gray	

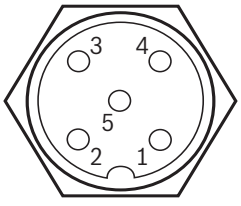
[1] When using a pressure transducer with raised zero point (e.g., 4 ... 20 mA), a voltage of –1 ... –2.5 V will be output in case of a cable break.

Functions at pin 9

Pin	Additional function	Function dependent on pos. 7 of the ordering code (order, see ordering code)	Signal direction	Type of signal
9	"A"	Selecting a different oil volume adjustment (switch T_D)	IN	logic 24 V
	"B"	Power limitation active	OUT	logic 24 V
	"C"	Command value of power limitation	IN	analog 0 ... 10 V
	"D"	Switch off pressure controller	IN	logic 24 V

Connection of pressure transducer type HM20 "X2"

Pin	Signal HM20	Pin	
1	OUT, $+U_B$	2	n.c.
3	Reference L0		
4	IN, analog, 0.5 ... 5 VDC	5	n.c.



☞ **Note:**
Mating connectors can be ordered separately, see page 43.

Electrical connection: Type SYHDFED

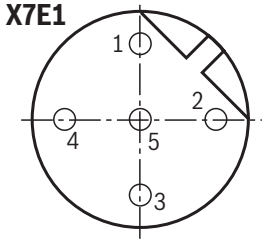
Assignment of connector or mating connector and cable set "XH4", central connection

Pin	Signal	Description	Signal direction	Type of signal	Assignment in cable set (accessories)	
1	$+U_B$	Supply voltage	IN	24 VDC	1	Supply line 3 x 1.0 mm²
2	0 V = L0	Reference potential supply voltage	–	–	2	
PE	Ground	Grounding connection for the electronics	–	–	green/yellow	
3	DO	Switching output 24 V max. 1.5 A Factory setting: Error signal	OUT	logic 24 V	white	Supply line 10 x 0.14 mm² shielded (one end of the shield must be connected to the control)
4	M0	Reference potential for analog signals	–	–	yellow	
5	AI2	Analog input 2 (or digital input, configuration via software)	IN	analog ±10 V (digital 24 V)	green	
6	AO2	Analog output 2 Factory setting: Actual swivel angle value, normalized	OUT	analog ±10 V or 0 ... 20 mA [1]	violet	
7	AI1	Analog input 1 (or digital input, configuration via software)	IN	analog ±10 V (digital 24 V)	pink	
8	AO1	Analog output 1 Factory setting: Actual pressure value, normalized	OUT	analog ±10 V or 0 ... 20 mA [1]	red	
9	DI	Digital input (use freely configurable)	IN	logic 24 V	brown	
10	Actual pressure value H	Actual pressure value input (analog input 8): Signal level depends on parameter setting. Factory setting dependent on pos. 13 of the ordering code: 0 ... 10 V (V) or deactivated (F)	IN	analog 0 ... 10 V (freely configurable)	black	
11	Actual pressure value L		–	analog	blue	
n.c.					gray	

[1] If the analog inputs AI1 and AI2 are not used, the analog outputs AO1 and AO2 may be parameterized as current outputs (e.g., if the command value presetting is realized via the fieldbus).

Connector pin assignment for Ethernet interface "X7E1" and "X7E2" (coding D), M12, 4-pole, socket

Pin	Assignment
1	TxD +
2	RxD +
3	TxD –
4	RxD –
5	Not assigned



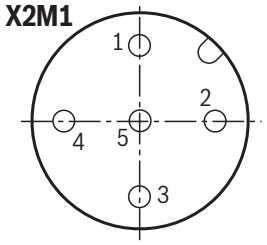
Electrical connection: Type SYHDFED

Analog configurable sensor interfaces, connections "X2M1", "X2M2" (coding A), M12, 5-pole, socket

Pin	Assignment
1	Voltage output (sensor supply) [2)]
2	Sensor signal input current [3)]
3	GND
4	Sensor signal input voltage [3)]
5	Negative differential amplifier input to pin 4 (optional)

[2)] Maximum load capacity 50 mA, voltage output same as voltage supply connected to input XH4.

[3)] Only one signal input configurable per interface



Note:
- X2N, reserved (not used)
- Actual swivel angle value input X8A input (coding A), M12, 5-pole, socket M12
- Mating connectors can be ordered separately, see page 43.

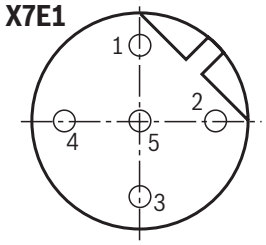
Electrical connection: Type SYHDFEF

Assignment of connector or mating connector and cable set "XH1", central connection

Pin	Signal	Description	Signal direction	Type of signal	Assignment in cable set (accessories)	
A	$+U_B$	Voltage supply	IN	24 VDC	brown	Supply line 3 x 1.0 mm²
B	0 V = L0	Reference potential for the voltage supply	–	–	yellow	
PE	Ground	Grounding connection for the electronics	–	–	green/ yellow	
C	–	Do not use	–	–	green	Supply line 10 x 0.14 mm² shielded (one end of the shield must be connected to the control)
D	AI1	Analog input 1 (freely-configurable)	IN	analog ±10 V or 0 ... 20 mA	blue	
E	M0	Reference potential for analog signals	–	–	gray	
F	AO1	Analog output 1 (freely-configurable)	OUT	analog ±10 V or 0 ... 20 mA	white	

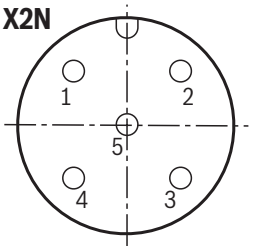
Connector pin assignment for Ethernet interface "X7E1" and "X7E2" (coding D), M12, 4-pole, socket

Pin	Assignment
1	TxD +
2	RxD +
3	TxD –
4	RxD –
5	Not assigned



Connector pin assignment for analog configurable sensor interface "X2N" (coding A), M12, 5-pole, socket

Pin	Assignment
1	Voltage output [1)]
2	Analog voltage input 2
3	GND
4	Analog voltage input 4
5	Analog voltage input 3

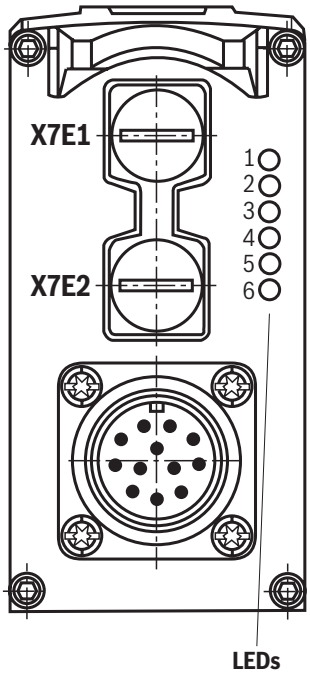


1) Maximum load capacity 3 x 25 mA, voltage output same as voltage supply connected to input XH1.

Note:
- Actual swivel angle value input X8A1 (coding A), M12, 5-pole, socket M12
- We recommend connecting the shields on both sides via the metal housings of the plug-in connectors. Using connector pins will affect the effectiveness of the shielding effect. Internal screens are not required.
- Mating connectors can be ordered separately, see page 43.

LED indicators: Type SYHDFED

LED	Interface	Sercos	EtherNET/IP	EtherCAT	PROFINET RT	POWERLINK	VARAN
1	**X7E1**	Activity	Activity	Not used	Activity	Not used	Active
2		Link	Link	Link/activity	Link	Link/data activity	Link
3	**Electronics module**	S	Network status	Network status	Network status	Status/error	Network status
4		Module status	Module status	Module status	Module status	Module status	Module status
5	**X7E2**	Activity	Activity	Not used	Activity	Not used	Not used
6		Link	Link	Link/activity	Link	Link/data activity	Not used



Meaning of the status LEDs

Network status LED (LED 3)	Display status
See firmware and software description 30338-FK	

Module status LED (LED 4)	Display status
Off	No voltage supply
Green-red, flashing	Self-test
Green, flashing	Drive ready for operation
Green	In control
Orange, flashing	Warning
Red, flashing	Error

☞ **Note:**
- For the connection to the M12 sockets, we recommend using self-locking mating connectors
- LEDs 1, 2, 5 and 6 relate to interfaces "X7E1" and "X7E2"
  - Link: Cable plugged in, connection established (permanently lit)
  - Activity: Data sent/received (flashing)
- The network status LED 3 (NS) indicates the status of the control communication, see firmware and software description 30338-FK.
- Module status LED 4 relates to the electronics module
- For a detailed description of the diagnosis LEDs, please refer to the functional description Rexroth HydraulicDrive HDx.

LED indicators: Type SYHDFEF

LED	Interface	Sercos	EtherNET/IP	EtherCAT	PROFINET RT	VARAN

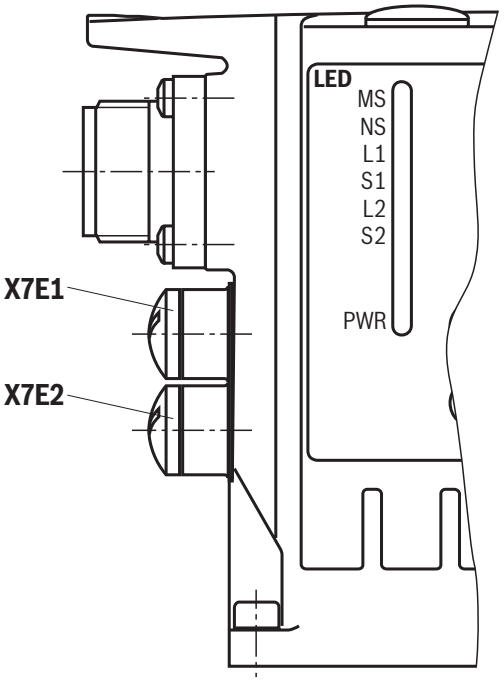
S2		Activity and others	Activity and others	Not used	Activity and others	Not used
PWR	**XH1**	Power	Power	Power	Power	Power



Meaning of the status LEDs

Power LED (LED PWR)	Display status
Off	No voltage supply
Green	Operation

Module status LED (LED MS)	Display status
Off	No voltage supply
Green-red, flashing	Initialization
Green, flashing	Drive ready for operation
Green	Drive active
Orange, flashing	Warning
Red, flashing	Error
Green, rapidly flashing	Firmware must be loaded

Note:
- For the connection to the M12 sockets, we recommend using self-locking mating connectors
- The MS module status LED relates to the electronics module
- The NS network status LED indicates the status of the control communication, see application description 30338-FK
- LEDs L1, S1, L2 and S2 relate to interfaces "X7E1" and "X7E2"
  - Link: Cable plugged in, connection established (permanently lit)
  - Activity: Data sent/received (flashing)
- For a detailed description of the diagnosis LEDs, please refer to the functional description Rexroth HydraulicDrive HDx.

Control loop quality

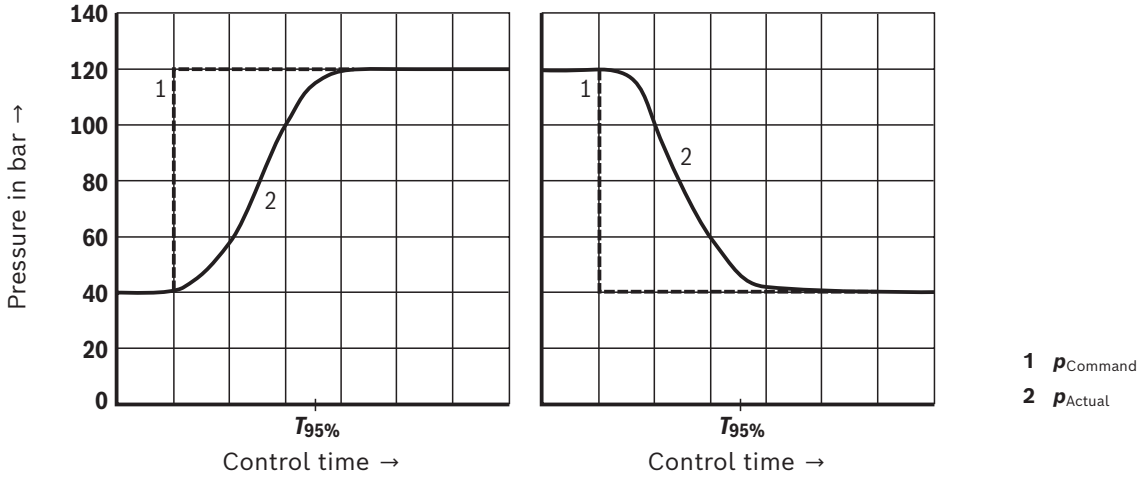
	Swivel angle control	Pressure control [1]
Linearity tolerance	≤ 1.0%	≤ 1.5% (≤ 1.0% [2])
Temperature error	≤ 0.5% / 10 K	≤ 0.5% / 10 K
Hysteresis	≤ 0.2%	≤ 0.2%
Repetition accuracy	≤ 0.2%	≤ 0.2%

1) Without considering the pump pulsation
2) With type SYHDFED and SYHDFEF using the integrated calibration function

Note:
- The specified values are only valid when using the system components specified in this data sheet (see page 43).
- At pressures <20 bar, higher tolerances have to be anticipated due to lower actuating forces.

Characteristic curves
(measured with HLP46, ϑ_{oil} = 40±5 °C)

Transition function for pressure command value step (control spool version "A")



$T_{95\%}$ in ms with connected hydraulic fluid volumes (lines and actuators)

Hydraulic fluid volume in l	$T_{95\%}$ in ms
<5	150
5 ... 10	200
15 ... 25	250

Note:
- For pressures up to 40 bar, the values of the response times are greater.
- The specified curve shapes and control times refer to a drive speed of 1500 rpm and are only reached with an optimization of the pressure controller.

Characteristic curves

(measured with HLP46, ϑ_{oil} = 40±5 °C)

Transition function with swivel angle command value step (control spool version "A")

NG40 and 71 (***p*** = 100 bar)

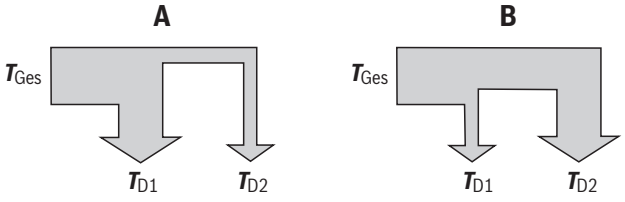
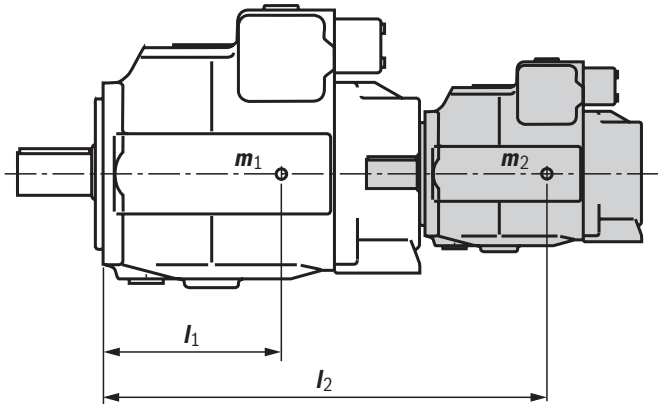
Distribution of through-drive torques



Mass torque (relates to mounting flange of main pump)

Size			40	71	125	180	250	355
Maximum mass torque	$T_{m\ adm.}$	Nm	1800	2000	4200	4200	9300	9300
Maximum mass torque with dynamic mass acceleration of 10 g = 98.1 m/sec²	$T_{m\ adm.}$	Nm	180	200	420	420	930	930
Weight (SYHDFE or A4VSO...DR)	m	kg	39	53	88	102	184	207
Distance of the center of gravity	l_1	mm	120	140	170	180	210	220



m_1, m_2 Weight of the pump in kg

l_1, l_2 Distance of the center of gravity in mm

$$T_m = m_1 \cdot l_1 \cdot \frac{1}{102} + m_2 \cdot l_2 \cdot \frac{1}{102} \quad [Nm]$$

Dimensions: Through-drives – sizes 40 and 71 (dimensions in mm)

The control systems of size 40 ... 71 are partly supplied with through-drive "K99".
Their advantage is that the through-drive is subsequently convertible. By simply exchanging the intermediate flange and the hub, the through-drive can be adjusted to the on-site requirements.
The assemblies as exchange kits can be ordered separately, see "Accessories for through-drives" on page 41 as well as data sheet 95581.

Small centering diameters have been directly integrated into the pump port subplate. Here, a subsequent modification is not possible. In this connection, observe the "Ordering code" as well as "Accessories for through-drives". Hubs for through-drives can be ordered separately.

▶ **"K99"** With through-drive shaft, without hub, without intermediate flange, closed operationally safe with end cover.

☞ **Notice:**
Left view, drawing without cover.

Dimensions: Through-drives – size 125 ... 355 (dimensions in mm)

The control systems of size 125 ... 355 are supplied with universal through-drives "U99".
Their advantage is that the through-drive is subsequently convertible. By simply exchanging the intermediate flange and the hub, the through-drive can be adjusted to the on-site requirements.

The assemblies as exchange kits can be ordered separately, see "Accessories for through-drives" on page 41 as well as data sheet 95581.

▶ **"U99"** With through-drive shaft, without hub, without intermediate flange, closed operationally safe with end cover.

Accessories for through-drives

The following conditions apply to the attachment pumps listed in the table:
- Internal gear pump type PGH with shaft "R", mounting flange "U2", see data sheet 10223
- Internal gear pump type PGF3 with shaft "J", mounting flange "U2", see data sheet 10213
- External gear pump type AZPF with shaft "R," front cover "R", see data sheet 10089

Flange and through-drive (see ordering code page 2) must be the same. Check in the current data sheet of the gear pump whether the shaft ends have the same specified dimensions.

12-pole mating connector for central connection X1 with cable set 2 x 20 m	**R900860399**	–
Pressure transducer HM20-2X, measurement range 400 bar (4 ... 20 mA)	**R901456334**	30272
Pressure transducer HM20-2X, measurement range 400 bar (0.1 ... 10 V)	**R901466598**	30272
Pressure transducer HM20-2X, measurement range 315 bar (0.5 ... 5 V) with 0.5 m cable	**R901342038**	30272
Test device VT-PDFE-1-1X/V0/0	**R900757051**	29689-B
Compact power supply unit VT-NE32-1X	**R900080049**	29929

SYHDFED	Material number	Data sheet
12-pole mating connector for central connection XH4 without cable (assembly kit)	**R900884671**	08006
12-pole mating connector for central connection XH4 with cable set 2 x 5 m	**R900032356**	–
12-pole mating connector for central connection XH4 with cable set 2 x 20 m	**R900860399**	–
Pressure transducer HM20-2X, measurement range 400 bar (4 ... 20 mA)	**R901456334**	30272
Pressure transducer HM20-2X, measurement range 400 bar (0.1 ... 10 V)	**R901466598**	30272
Pressure transducer HM20-2X, measurement range 315 bar (0.5 ... 5 V) with 0.5 m cable	**R901342038**	30272
Test device VT-PDFE-1-1X/V0/0	**R900757051**	29689-B
Compact power supply unit VT-NE32-1X	**R900080049**	29929
Ethernet connection cable M12 to RJ45 (connection X7E1 & X7E2), additional information type designation RKB0044/xxx.x (xxx.x: length in meters)	**R911172135**	–
Commissioning software IndraWorks DS from version 14V14	**–**	–

SYHDFEF	Material number	Data sheet
6-pole mating connector for central connection XH1 without cable (assembly kit)	**R900021267**	08006
6-pole mating connector for central connection XH1 with cable set 3 m	**R901420483**	08006
6-pole mating connector for central connection XH1 with cable set 5 m	**R901420491**	08006
6-pole mating connector for central connection XH1 with cable set 10 m	**R901420496**	08006
Pressure transducer HM20-2X, measurement range 400 bar (4 ... 20 mA)	**R901456334**	30272
Pressure transducer HM20-2X, measurement range 400 bar (0.1 ... 10 V)	**R901466598**	30272
Pressure transducer HM20-2X, measurement range 315 bar (0.5 ... 5 V) with 0.5 m cable	**R901342038**	30272
Ethernet connection cable M12 to RJ45 (connection X7E1 & X7E2), additional information type designation RKB0044/003,0	**R911343806**	–
Commissioning software IndraWorks DS from version 15	**–**	–

Project planning information

- Command values may only be switched via relays with gold-plated contacts (low voltage, low currents).
- Always shield command and actual value cables.
- The distance to aerial lines or radios must be at least 1 m.
- Do not lay signal lines close to power lines.
- For further information on the control system type SYDFE, see the operating instructions (see "Further information").

Installation information

Tightening torques:

- The tightening torques specified in this data sheet are maximum values and must not be exceeded (maximum values for screw-in threads).
  Manufacturer's specifications regarding the maximum admissible tightening torques of the fittings used are to be observed.
- For mounting screws according to DIN 13, we recommend checking the tightening torque on a case by case basis according to VDI 2230, version 2003.
